

# Application Case Study

<b>Project:</b>	<b>Travellers Rest Public House</b>	<b>Location:</b>	<b>Sowerby Bridge, West Yorkshire</b>
<b>Products:</b>	i-plas Freestanding Picnic Tables		

## The Challenge

Traditional wooden furniture does not cope well with the extremes of the British climate. Constant exposure to the elements means an ongoing and costly maintenance regime and often the furniture is too wet to use. Stability and durability of this type of furniture is also compromised over time.

The challenge to i-plas was to provide The Travellers Rest, situated in a magnificent position overlooking the Calder Valley, with strong durable, maintenance-free outdoor furniture.

Strong, stable and durable

## i-plas Solution

i-plas supplied picnic tables manufactured from waste plastic generated within the brewing industry.

i-plas picnic tables are extremely stable and at 120kg can be freestanding but can be made with longer legs which can be set in the ground for prevention against theft.

## Client Benefits

i-plas products offer the following benefits making them ideal for this type of application:

- Maintenance-free
- Easy to clean
- Will not rot
- Chip, crack and splinter proof
- Vandal resistant
- Insect and animal resistant
- Fully recyclable
- Resistant to fading
- Water resistant
- Heavy weight construction

Suitable for all outdoor applications

*"A strong, heavy weight picnic table that can be wiped clean and is very hygienic; very safe for use by my customers and complements my pub's setting"*

Caroline Lumley, Landlady, Travellers Rest, Sowerby Bridge
